Professional Experience

Software Engineer – Automation Testing

September 2025 – Present

Capgemini, Bangalore — Client: MUFG

- Developed an end-to-end BDD Cucumber automation framework for a payments automation project, validating payment files generated across two applications. Built a file comparison tool to perform line-by-line validation and identify position mismatches, missing data, missing fields, blank values, and other discrepancies between input and generated files, **reducing manual testing effort and improving validation accuracy**.
- Integrated the comparison tool with automated BDD test scenarios and Cucumber reporting, generating detailed reports with step-level results and screenshots for failures, significantly reducing manual file validation effort and improving accuracy and traceability.
- Worked in the payments domain using Finastra applications, performing daily sanity and regression testing to validate payment workflows and identify defects before release.
- Developed an Azure DevOps pipeline for a payments automation project and created a standalone test execution program, enabling automated test cases to be executed independently through the CI/CD pipeline.
- Maintained and enhanced Selenium automation frameworks across multiple projects, including dynamic XPath maintenance and optimization to improve test stability and reduce locator-related failures.
- Leveraged AI models to assist with automation development, test-case analysis, XPath optimization, debugging, and generation of reusable automation components, improving development efficiency while validating and refining AI-generated solutions.

Software Engineering Intern

December 2024 – February 2025

Altysys, Pune

- Developed backend services using Java and Spring Boot, implementing business logic and modular components to improve application functionality and scalability.
- Designed and integrated RESTful APIs for communication between backend services and frontend components, implementing request validation, exception handling, and structured API responses.
- Worked with Git-based development workflows, contributing to feature development, code reviews, debugging, and integration of Java backend components with React-based frontend applications.

Technical Skills

Languages	Java, Python
Automation	Selenium, TestNG, JUnit, Postman, TDD, BDD, Cucumber
Backend/DevOps	Spring Boot, REST APIs, Microservices, AWS, Docker, Jenkins, CI/CD
Frontend	HTML, CSS, React, Tailwind
Databases/Tools	MySQL, PostgreSQL, MongoDB, Git, GitHub, Jira, SonarQube

Projects

Ixigo Bus Booking Automation

October 2025 – December 2025

- Developed an automation framework for bus booking workflows including search, filtering, seat selection, and check-out.
- Implemented dynamic element handling and reusable components, improving script maintainability and reliability.
- Reduced manual testing effort and improved execution efficiency through automation.

SkyCast – Weather App

May 2025 – June 2025

- Built a full-stack weather application using Spring Boot and React with scalable architecture.
- Designed and consumed RESTful APIs for real-time weather data processing.
- Developed a responsive UI ensuring smooth user interaction across devices.

Education

B.Tech CSE (Cloud Computing), SRM University, Chennai	2021 – 2025
Class XII, The Millennium School, Lucknow	2020 – 2021
Class X, La Martiniere College, Lucknow	2018 – 2019

Certifications

- ISTQB - Certified Tester Foundation Level (CTFL)
- Anthropic - Claude Certified Architect
- Zscaler - Zero Trust Certified Associate
